NANDITA BHARTI

Greater Noida, India | 8294211014 | nanditabharti628@gmail.com | LinkedIn | GitHub

SUMMARY

Computer Science student specializing in Java backend engineering, with hands-on experience building secure, production-style REST APIs using Spring Boot, Spring Security, and JWT-based authentication. Solid foundation in Data Structures & Algorithms (300+ problems solved across LeetCode, CodeChef, and Codeforces) and a growing interest in applying AI/ML to backend and security systems.

EDUCATION

Bachelor of Technology in Computer Science — *Sep. 2024 – May 2028*
G.L. Bajaj Institute of Technology and Management — GPA: 9.1 / 10.0

Intermediate — 85.5% — *March 2023*

High School — 94.4% — *March 2021*

PROJECTS

Employee Management System | *Java, Spring Boot, Spring Security, JWT, JPA/Hibernate, MySQL*

- Built a production-style RESTful Employee Management System covering employee, department, attendance, leave, and document management modules
- Implemented stateless JWT authentication and role-based authorization (ADMIN, HR, EMPLOYEE) using Spring Security, with BCrypt password encryption
- Added centralized exception handling and request validation, and documented all endpoints with Swagger/OpenAPI
- Designed the relational schema and persistence layer with JPA/Hibernate and MySQL

JWT Security — Spring Boot Authentication & Authorization | *Java, Spring Boot, Spring Security, JJWT, Spring Data JPA*

- Engineered a stateless authentication REST API that issues signed JWTs on login and validates them on every request via a custom JWTAuthenticationFilter
- Implemented BCrypt-based user registration and role-based access control for protected endpoints, removing the need for server-side session storage
- Configured DaoAuthenticationProvider and SecurityFilterChain for a fully stateless security architecture backed by Spring Data JPA

Job Portal Application | *Spring Boot, React, PostgreSQL, Docker*

- Developed a full-stack job portal with Spring Boot REST APIs and a React frontend supporting job creation, retrieval, updating, deletion, and keyword-based search with pagination
- Designed a layered Spring Boot architecture (Controllers, Services, Repositories, DTOs, Mappers) with validation, centralized exception handling, and Swagger/OpenAPI documentation
- Containerized the backend and PostgreSQL database with Docker and configured CORS for seamless frontend–backend integration

TECHNICAL SKILLS

Languages: Java, JavaScript, Python, C, HTML/CSS

Backend & Security: Spring Boot, Spring Security, Spring Data JPA/Hibernate, JWT, REST APIs, Swagger/OpenAPI

Databases & Tools: MySQL, PostgreSQL, Docker, Git, GitHub, Postman, IntelliJ IDEA, Eclipse, VS Code, Android Studio

Core Concepts: Data Structures & Algorithms, Object-Oriented Programming

CODING PROFILES

- **LeetCode:** leetcode.com/u/Nandita140 — 300+ problems solved
- **CodeChef:** codechef.com/users/drift_bowl_87
- **Codeforces:** codeforces.com/profiles/nandita140

LEADERSHIP / EXTRACURRICULAR

- Letter of Recommendation from the Entrepreneurship Development Cell of IIT Delhi for the Campus Ambassador Program, 2026
- Semi-Finalist, Smart India Hackathon (SIH) 2025 — built a Smart Inventory API
